FIT

Tell me about yourself?

"My name is Adrian Turion, I'm 24, originally from Aix-en-Provence in the south of France. I grew up in an entrepreneurial and international family — my father ran an import-export business in the Dominican Republic — so from a young age I was exposed to risk-taking and to how global trade actually works.

That experience made me curious about markets and geopolitics very early on. I've since started a few small ventures myself, sourcing products from China and negotiating directly with suppliers, which taught me both commercial instinct and resilience.

At 17 I moved to Switzerland to pursue an international career in finance. I studied at HEC Lausanne, completing a bachelor in management and a double master in finance and economics, finishing in the top 10 percent of the class and studying abroad in Tokyo and Maastricht.

Professionally, I began at Europ Assistance, a Generali subsidiary, where I worked on aligning CHF 30 million of premiums with expected claims — essentially managing risk. Then at RC Group I supported two cross-border acquisitions, coordinating suppliers and optimizing logistics.

I now work full-time at Auraïa Capital Advisory in Geneva, advising companies on M&A transactions. One project had a direct link to commodities: we built the sales operations of a Swiss physical broker, negotiating refinery contracts, logistics, and even hedging inventory positions.

If I look back, the common thread has always been geopolitics, supply chains, risk management and deal-making — all core to commodity trading. What attracts me to Gunvor is precisely that combination of commercial drive, physical logistics and international exposure.

In one line: I bring intensity, analytical discipline and an entrepreneurial mindset — the same traits that make Gunvor successful in the markets."

Why commodity trading?

1️⃣ **Real-world impact & tangible value (More than paper trading)**

- **Physical + financial:** You move real molecules and metals, not just numbers—pricing, logistics, and contracts change what ships where tomorrow.
- **Supply chains under pressure:** Geopolitics, weather, and infrastructure constraints create genuine problems to solve with immediate P&L consequences.
- **Customer value:** You secure supply for refiners, utilities, and industries—your decisions keep economies running.

2️⃣ **Intellectual challenge under uncertainty (Passion for Geopolitics (US, CN, EU), forefront of what's happening)**

- **Multi-variable puzzles:** Blend macro, microstructure, quality diffs, freight, and optionality—constant hypothesis → test → iterate.
- **Data to dollars:** Use stats and coding to turn flows and time-series into trade ideas, then manage basis, credit, and ops risks.
- **Speed + discipline:** Make decisions with incomplete info, hedge smartly, and evaluate outcomes fast.

3️⃣ **Ownership, meritocracy & steep learning curve**

- **Direct accountability:** Clear feedback loop—good ideas scale, bad ones are cut; you see your impact in P&L.
- **Apprenticeship model:** Learn next to experienced traders across ops/risk/trading—true 360° craft building.
- **Fits my wiring:** I like high tempo, clear scoreboards, and responsibility early; the culture rewards resilience and edge.

Closing line (optional):

"I'm drawn to commodities because it's where analysis meets action—real assets, real risk, and a meritocratic path where I can learn fast and contribute from day one."

Why Gunvor?

1️⃣ Distinctive Position in Global Energy Trading

- **Integrated but agile:** Gunvor combines scale (>$130 bn revenue) with entrepreneurial speed — decisions remain fast because ownership is concentrated and operations lean.
- **Logistics advantage:** Through **Clearlake Shipping**, Gunvor controls one of the world's largest chartered fleets, giving real insight into freight markets and a tangible edge in physical arbitrage.
- **Diversified energy reach:** Active across crude, refined products, LNG, power, biofuels and carbon — offering exposure to every part of the energy value chain.

2️⃣ Pragmatic Energy-Transition Strategy

- **Tangible projects, not slogans:** The **Gunvor Energy Rotterdam** refinery is being repurposed for **Sustainable Aviation Fuel (SAF)** and circular-plastic initiatives.
- **Future-proofed LNG growth:** Long-term supply deals (e.g. Texas LNG, 20 years) secure access to a cleaner bridge fuel for the next decade.
- **Dedicated platform — Nyera:** Invests in low-carbon technologies, solar, and biofuels → demonstrates a realistic, commercially driven transition.

3️⃣ Culture of Ownership, Learning & Meritocracy

- **Entrepreneurial mindset:** Small, high-impact teams where graduates work directly with traders and decision-makers from day one.
- **Structured 360° exposure:** The **Global Graduate Program** rotates across trading, risk, operations and analytics → builds full-cycle understanding.
- **Strong mentorship:** Flat hierarchy means constant feedback and accelerated growth for those who perform.

Investment ideas

1️⃣ LNG Optionality into Europe

(Owning gas import capacity and using it flexibly)

Pitch version:

- Secure multi-year regas slots or floating terminals (FSRUs) in key European ports to trade TTF vs JKM and seasonal spreads.
- Use Clearlake's fleet to reposition ships and capture freight dislocations.
- Manage risk by reselling unused capacity and hedging basis through paper gas markets.

Simplified explanation:
Europe imports liquefied natural gas (LNG) by ship, then turns it back into gas through "regasification terminals." Those terminals often become bottlenecks.
If Gunvor owned or leased some of that capacity, it could choose when and where to deliver cargoes — making money when European gas prices are higher than in Asia (TTF vs JKM spread).
And because Gunvor already runs a huge shipping arm, it can move vessels smartly depending on price differences. If the market turns, it can rent that capacity to others or hedge financially, so the downside is limited.

2️⃣ Rotterdam Low-Carbon Liquids Hub

(Scaling sustainable aviation and road fuels at Gunvor's refinery)

Pitch version:

- Expand SAF and HVO production at Gunvor Energy Rotterdam to meet rising European mandates.
- Control feedstock sourcing (waste oils, tallow, etc.) and add pyrolysis-oil processing for more flexibility.
- Finance the project through long-term offtake deals and carbon-credit revenues.

Simplified explanation:
Airlines and truck fleets are legally required to use a growing share of "green fuels." Gunvor's Rotterdam refinery is already testing Sustainable Aviation Fuel (SAF) and bio-diesel (HVO).
By investing more there, Gunvor could process waste cooking oil or animal fats into cleaner fuels. It's a real industrial business, not just trading paper credits — and buyers like airlines would happily sign long-term contracts to secure supply.
That means stable cash flows and a strong image for Gunvor in the energy transition, using infrastructure it already owns.

3️⃣ Power-Market Flexibility

(Owning batteries to trade electricity volatility)

Pitch version:

- Build or partner on large-scale battery sites (100–300 MW) in UK, Germany or Spain.
- Optimise them in real time to profit from price swings and provide grid-balancing services.
- Secure part of revenues with capacity contracts and locate sites where grid congestion is highest.

Simplified explanation:
As Europe adds more solar and wind, electricity prices move up and down faster. Batteries can store power when it's cheap and sell it when it's expensive — literally buying low and selling high in seconds.
If Gunvor owned or partnered in a few big battery parks, its traders could manage them the same way they trade oil or gas — reacting to price signals every minute.
That creates a new profit stream, while also helping stabilise the grid and supporting Gunvor's power-and-carbon desks.

RESSOURCES

Company one-pager

- **Positionnement.** Négociant indépendant d'énergie parmi les plus importants au monde (trading physique de brut & produits raffinés, gaz naturel & LNG, biofuels, power & émissions), avec une intégration logistique (shipping, stockage, raffinerie) et des investissements ciblés "energy transition". Gunvor Group

- **Chiffres clés 2024.** Chiffre d'affaires **$136 Md**, volumes **232 MMT**, **EBITDA/gross profit $1.8 Md**, **net profit $729 M**, **equity $6.5 Md**. Environ **1 700** employés et **20+** bureaux. Gunvor Group+1

- **Actionnariat & structure.** Groupe privé, **siège opérationnel à Genève** et **société mère enregistrée à Chypre** ; **~84–85 %** détenus par Torbjörn Törnqvist, **~15–16 %** par l'Employee Shareplan (aucun actionnaire externe). Gunvor Group+1

- **Atout logistique. Clearlake Shipping** (filiale 100 %) compte parmi les plus gros affréteurs de tankers au monde ; la marge "freight" est devenue un relais de performance clé. Gunvor Group+1

- **Actifs & transition. Gunvor Energy Rotterdam** (ex-GPR) pivote vers des projets bas-carbone : JV en **SAF** avec **VARO** sur site, recyclage plastiques, terminal hydrogène vert (projet). Gunvor Group+2reuters.com+2

- **Développement LNG & power.** Accords long terme (ex. **Texas LNG, 0,5 mtpa/20 ans**) ; montée en puissance dans le power/émissions. Gunvor Group+2Gunvor Group+2

Ce que Gunvor fait aujourd'hui (2024–2025)

- **Diversification "asset-light + selective assets".** Investissements récents : **production électrique en Espagne**, **retail carburants au Pakistan**, **gaz amont aux USA**, **solaire en Italie** (en parallèle du core trading). Gunvor Group

- **LNG de long terme.** Accord **Texas LNG** (Brownsville, 0,5 mtpa, 20 ans) et autres contrats annonçant une profondeur d'approvisionnement sur 2030+. reuters.com+1

- **Actualité sensible (nov. 2025).** Gunvor **renonce** à son projet d'acquisition d'actifs internationaux de **Lukoil** après l'opposition de Washington ; le groupe réfute les accusations et souligne sa conformité. (Sujet possible en entretien : financement, sanctions, réputation, risk management.) reuters.com+1

Gouvernance, conformité & réputation (ce qu'il faut savoir en entretien)

- **Programme de conformité renforcé** (Code of Conduct & Ethics actualisé, policies partenaires, Modern Slavery Statement). Gunvor Group+1

- **Dossiers passés.** En **mars 2024**, Gunvor S.A. a **plaidé coupable** aux **États-Unis** pour des faits liés à **Petroecuador** (FCPA) et convenu d'un règlement **> $660 M** ; la **MPC suisse** a parallèlement retenu une responsabilité pénale (manquements organisationnels). Le groupe dit avoir revu ses pratiques et équipes. reuters.com+2AP News+2

- **Objectifs climat.** Réduction **-40 % Scope 1&2 d'ici 2025** et création de la plateforme **Nyera** pour investir dans les renouvelables et technologies de décarbonation. reuters.com+1

Comment se différencie Gunvor vs. ses pairs (angles "Why Gunvor")

- **Edge logistique & shipping.** Clearlake donne un vrai levier d'arbitrage "voyage/fret/FFA" et de sécurisation des flux. Gunvor Group+1
- **Énergie de transition pragmatique.** SAF à Rotterdam avec VARO, projets hydrogène/plastiques, montée en power & ETS → des angles "commercial + carbone" concrets. reuters.com+2Gunvor Group+2
- **LNG long-terme.** Contrats de 10–20 ans qui stabilisent des chaînes d'approvisionnement et créent du flow multi-annuel pour les desks. reuters.com
- **Taille/rapidité.** Plus agile que certains géants, avec une gouvernance resserrée (actionnariat concentré) et des décisions rapides. Gunvor Group

Global Graduate Program – Trading & Supply Chain (Geneva base)

Format & rotations. Programme **24 mois** en **3 rotations de 8 mois** couvrant **trading desks, risk, operations, analytics** (exposition "full lifecycle" du trade). Formation structurée (onboarding + classes) et **mentorat**. gunvor.wd3.myworkdayjobs.com+1

Localisations. Hubs principaux : **Genève, Singapour, Houston** (+ possibilités dans d'autres bureaux du réseau >20). Gunvor Group+1

Exposition métier.

- **Trading desks** (crude/products/LNG/power/biocarburants). Gunvor Group
- **Shipping/chartering via Clearlake** (100+ navires en mer au quotidien selon la page programme). Gunvor Group
- **Raffinerie & transition** (visites/immersions à **Gunvor Energy Rotterdam** et projets Nyera/SAF). Gunvor Group+1

Profil recherché. Diplôme récent (finance/éco/ingé/math/stats/commodity trading, etc.), **≤ 12 mois** d'expérience (hors stages), solides skills **numériques/analytique**, **résilience**, **communication**, **curiosité marchés/énergie**, **mindset international**. gunvor.wd3.myworkdayjobs.com

Processus & calendrier 2025.

- Candidatures **jusqu'au 31 octobre 2025** (workday). Gunvor Group
- **Online assessments** (numérique & abstrait), puis **Face-to-Face Interview Day** / "Selection Day" en étape finale. Gunvor Group

---

Points à préparer (liés au rôle)

- **Comprendre les "trade levers".** Différentiels qualité (API/soufre), cracks & spreads (3-2-1, diesel crack), arbitrages régionaux, storage/contango, **freight economics** (Aframax/Suezmax, TC/FFA). Gunvor Group+1
- **LNG & power.** Basics des **SPAs** LNG (FOB/DES, take-or-pay, flex options), hubs gaziers européens, ETS/EUA, et le lien avec data centers/électrification. Gunvor Group
- **Transition & conformité.** Connaître le **cas Petroecuador** (capacité à parler de "lessons learned" et de la culture compliance) et les projets **SAF/Rotterdam** pour articuler "transition ≠ greenwashing". reuters.com+1
- **Actu chaude.** Être à l'aise pour commenter le **retrait de l'offre Lukoil**, les implications sanctions/financement, et ce que cela dit de la gouvernance des traders. reuters.com

---

"À retenir" en 6 bullets pour ton pitch

1. **Top-tier trader** avec **$136 Md** de revenus (2024) et un scope multi-commodities. Gunvor Group
2. **Edge logistique** via **Clearlake** (shipping/fret/FFA). Gunvor Group
3. **LNG** en croissance avec des **offtakes 10–20 ans** (Texas LNG). Gunvor Group
4. **Transition** tangible : **SAF JV** à Rotterdam, projets H2/plastics. reuters.com
5. **Culture** orientée **entrepreneuriat/mentorat**, rotations 360° (trading-risk-ops-analytics). Gunvor Group
6. **Conformité** : dossiers historiques soldés en 2024, programme renforcé → savoir en parler factuellement. reuters.com

Terms

⚡ Core Trading Terms

Term / Acronym	Definition
Crude grades (API, Sulphur)	Characteristics defining crude oil quality — API gravity (density) and sulphur content (sweet/sour). Affect refining margins and pricing.
Crack spread / 3-2-1 crack	Difference between crude oil and refined products prices (e.g. 3 barrels of crude → 2 gasoline + 1 diesel). Used to measure refinery margins.
Contango	Market structure where futures prices are higher than spot prices → incentive to store and sell later. Opposite: **backwardation**.
Arbitrage	Buying and selling the same or related commodities in different markets to profit from price differentials (regional, quality, timing, freight, etc.).
Freight economics	Cost and revenue structure of transporting commodities (e.g. tanker charter rates, time-charter equivalent, voyage cost).
FFA (Forward Freight Agreement)	Derivative contract to hedge or speculate on future freight rates.
Physical trading	The buying, transport, storage, and sale of physical commodities — not just financial derivatives.
Paper trading	Derivatives (futures, swaps, options) used to hedge or take positions without physical delivery.
Long / short position	"Long" = buying (expecting prices to rise). "Short" = selling or selling forward (expecting prices to fall).
Hedging	Reducing exposure to price movements using derivatives or opposite physical positions.
Basis risk	Risk that the hedge and the underlying physical exposure move differently.

🌍 Shipping & Logistics

Term / Acronym	Definition
Clearlake Shipping	Gunvor's in-house shipping arm, one of the world's largest charterers of tankers.
Aframax / Suezmax / VLCC / Panamax	Tanker size classes — roughly: Aframax (~80–120k DWT), Suezmax (~120–200k), VLCC (~200–320k), Panamax (~65–80k). Affect freight cost and route flexibility.
TC (Time Charter)	Contract to hire a vessel for a fixed period (charterer pays fuel).
Voyage Charter	Hire of a vessel for one voyage (owner pays fuel).

Bunker fuel	Fuel used to power ships. Its price affects shipping costs.
Storage arbitrage	Profit from storing a commodity when contango covers storage + financing costs.
Terminal	Storage and handling facility for oil, gas, or products (e.g. Gunvor Energy Rotterdam).

🔥 Energy & LNG

Term / Acronym	Definition
LNG (Liquefied Natural Gas)	Natural gas cooled to −162°C for transport by ship.
SPA (Sales and Purchase Agreement)	Long-term contract governing LNG trades (volumes, duration, pricing formula, delivery terms).
FOB (Free On Board)	Seller delivers cargo onto buyer's ship at loading port; buyer arranges shipping and insurance.
DES (Delivered Ex Ship)	Seller arranges transport and delivers to buyer's destination port.
Take-or-pay clause	Buyer must pay for agreed volumes even if not taken — ensures cash flow stability.
Hub price	Regional benchmark (e.g. Henry Hub, TTF, JKM).
Power trading / ETS / EUA	Electricity trading and European Emissions Trading System; **EUA** = EU Allowance (CO_2 permit).
SAF (Sustainable Aviation Fuel)	Renewable jet fuel from bio/synthetic sources; key part of energy transition.

📈 Market & Financial Metrics

Term / Acronym	Definition
EBITDA	Earnings Before Interest, Taxes, Depreciation, and Amortisation — proxy for operational profit.
Gross profit	Revenue minus cost of goods sold (trading margins).
Net profit	Final profit after all expenses, taxes, and interest.
Equity	Shareholders' capital or net asset value of the firm.
AUM	Assets Under Management (for investment funds).

Scope 1 / 2 / 3 emissions	CO_2 emissions: direct (1), indirect from energy (2), and full value chain (3).
SPREAD	Price difference between two related products (time, quality, or location). Examples: diesel-Brent, WTI-Brent.

⚖️ Legal, Governance & Compliance

Term / Acronym	Definition
FCPA (Foreign Corrupt Practices Act)	U.S. law against foreign bribery — Gunvor's 2024 case involved this.
MPC (Ministère public de la Confédération)	Swiss federal prosecutor's office — fined Gunvor for organisational failures.
Code of Conduct / Ethics Policy	Internal rulebook defining compliance and ethical standards.
Sanctions compliance	Risk management of trading with sanctioned countries or entities (e.g. Lukoil case).

⚙️ Program & Company-Specific

Term / Acronym	Definition
Rotation	An 8-month period within the graduate program focusing on a different function (trading, risk, ops, analytics).
Desk	Team focusing on one commodity or region (e.g. crude desk, LNG desk).
Ops (Operations)	Coordinates logistics, contracts, shipping, and documentation to execute physical trades.
Risk / Middle Office	Measures and manages market, credit, and operational risks.
Analytics	Quantitative and data work supporting traders (pricing models, flow analysis, macro data).
Nyera	Gunvor's investment platform for renewables and low-carbon technologies.
VARO JV	Joint venture between Gunvor and VARO Energy to produce SAF and other transition fuels.
Selection Day	Final assessment stage (case studies, group exercise, trader interviews).

Markets flash

Crude

- **Brent** settled **~$63.6** on Fri, **WTI ~$59.8**. OPEC+ decided to **pause planned output hikes in Q1-26**, which steadied prices after a soft October. Reuters+1

Gas & LNG

- **TTF front-month** around **€31.5/MWh (~$10.6/mmBtu)**, pressured by mild weather and comfortable storage. **EU gas storage ~83%**. TradingView+1
- **JKM** near **$11.1/mmBtu**; **Henry Hub ~$4.3/mmBtu**. Parity between basins reduces long-haul arbitrage. Reuters+1
- **LNG shipping**: spot rates climbed this week to **$67k/day USGC→EU** and **$72k/day USGC→Japan** on tighter vessel lists into winter. The Edge Malaysia+1
- **US LNG contracting**: 2025 is tracking **near-record long-term SPA volumes** despite higher liquefaction fees. Reuters

Freight (crude quick take)

- VLCC **MEG→China (TD3C)** spiked in Sept to **W108**, reflecting tighter tonnage and strong Mideast exports; keep an eye on Q4 seasonals. Reuters

Carbon

- **EUAs** around **€79–80/t** late this week; policy debate continues around ETS reforms and 2040 targets. Trading Economics+1

What to watch next

- OPEC+ communications into December loadings, EU weather turns that could lift TTF, Panama transit conditions for LNG, and any widening of JKM-TTF that re-opens the Pacific arb. Baltic Exchange Consumer

Mini-case: US Gulf LNG cargo — Europe vs Asia

Prompt you can give yourself
"You control one prompt-month LNG cargo FOB US Gulf. Do you sell DES Northwest Europe or DES Japan? Explain your decision using current prices and freight."

Data pack (today's markers)

- **TTF front-month ≈ €31.5/MWh ≈ $10.6/mmBtu** (LSEG data via Reuters/TradingView this week). TradingView
- **JKM prompt ≈ $11.13/mmBtu** (Nov 9). Reuters
- **Henry Hub front-month ≈ $4.32/mmBtu** (Nov 9). Reuters
- **LNG spot freight** (Baltic Exchange, Nov 7):
  - **US Gulf → Continent (BLNG2-174) ~ $67,100/day**
  - **US Gulf → Japan (BLNG3-174) ~ $71,700/day**. The Edge Malaysia
- **Round-voyage durations** used by the Baltic: **USGC→Continent ~29 days**, **USGC→Japan ~54 days via Panama**. Baltic Exchange Consumer+1
- **Typical cargo energy** for ~170k m^3 LNG ≈ **4.29 million mmBtu**. Clarus
- **EU storage** is seasonally healthy at ~**83%** this week. Kyos Gas

Quick calc (freight only, per mmBtu)

- Europe: 29 d × $67,100 / 4.29m ≈ **$0.45/mmBtu**.
- Japan: 54 d × $71,700 / 4.29m ≈ **$0.90/mmBtu**.
  (Baltic durations and rates above; cargo energy from NZ feasibility study.) Baltic Exchange Consumer+2The Edge Malaysia+2

Add a simple US FOB cost to get a netback view
A common US pricing proxy is **115% × Henry Hub + a fixed liquefaction fee (~$2.7–$3.0/mmBtu)**. With HH ~ $4.32, your FOB cost proxy is about **$5.0 + $2.8 ≈ $7.8/mmBtu**. CGEP+2Timera Energy+2

Indicative destination margins (ignoring regas and minor port fees)

- **Europe**: TTF $10.6 − FOB $7.8 − freight $0.45 ≈ **$2.4/mmBtu**.
- **Japan**: JKM $11.1 − FOB $7.8 − freight $0.90 ≈ **$2.4/mmBtu**.

Decision and talking points

1. **Arb is basically flat** – today JKM is only slightly above TTF and that uplift is largely eaten by longer, pricier freight. This mirrors recent reporting that **TTF and JKM have been near parity**, muting the pull to Asia. Reuters
2. **Choose Europe for speed and risk** – shorter voyage, quicker vessel turnaround, lower boil-off risk, fewer Panama-slot uncertainties. S&P Global

3. **Sensitivity to watch** – a +$1/mmBtu JKM move or a $10k/day swing in BLNG rates can tip the decision. Also track EU storage draws and weather; if storage erodes or Asia bids up, your optimal destination flips. Kyos Gas

If they push on technicals

- **Boil-off** on modern ships is ~**0.1–0.15%/day**; X-DF/ME-GI tonnage or reliquefaction lowers cargo loss and fuel burn. Wartsila.com+1
- **Why Europe has been sticky for US LNG** – proximity plus recent TTF-JKM parity. The US just logged **record LNG export months**, with a heavy Atlantic pull. Reuters+1
